## A. MAIN FEATURES:

1. IP 4K Pan Tilt Zoom camera with NDI | HX capability (via optional license).  
\*4K capability is optional for SRG-X400 / X120.
2. The sensitive 1/2.5-type Exmor R sensor shall capture high-quality 4K images with very low noise, even in dimly-lit environments.
3. High quality 20x optical zoom and 30x (4K) or 40x (FHD) with Clear Image Zoom:  
The high quality lens with 20x optical zoom range shall cover wide angle shots as well as tight close-ups. Clear Image Zoom shall expand this range to 30x (4K) or 40x (FHD) without sacrificing detail. In addition, the Tele Convert Mode shall be able to double this range again, up to 80x zoom while maintaining a 1920 x 1080 resolution. (For BRC-X400)  
  
High quality 20x optical zoom and 30x (4K) or 40x (FHD) with Clear Image Zoom:  
The high quality lens with 20x optical zoom range shall cover wide angle shots as well as tight close-ups. Clear Image Zoom shall expand this range to 30x (4K) or 40x (FHD) without sacrificing detail. (For SRG-X400)  
  
High quality 12x optical zoom:  
The high quality lens with 12x optical zoom range shall cover wide angle shots as well as tight close-ups. (For SRG-X120)
4. The camera shall cover the whole scene in sports arenas and lecture theatres with a horizontal viewing angle of approx. 70°.
5. NDI | HX compatibility (via optional license) shall support efficient IP-based live production, allowing flexible configuration with other networked NDI-enabled devices.
6. PTZ and other camera functions shall be able to be controlled remotely via S700PTP (for BRC-X400 only), CGI and VISCA protocols.
7. The camera shall capture the presenter's movements with maximum 300°/s pan and tilt movement during preset recall.
8. The camera shall be able to be used in conjunction with the AI-based REA-C1000 Edge Analytics Appliance to smoothly track the speaker's movements and automatically generate a cut-out image of speaker.

9. PTZ Motion Sync function shall allow smooth blending of separate pan, tilt and zoom movements for seamless, professional-looking transitions.
10. Excellent low light sensitivity:  
The camera shall be able to capture crisp, low noise color video images in light levels as low as 1.6 lx, making it an ideal choice for dimly-lit live hall and theater.
11. Flexible installation:  
Integration shall be simplified in a wide range of environments, with PoE+ (Power over Ethernet) to reduce cabling requirements and IP based remote control (S700PTP (for BRC-X400 only)), VISCA control over IP and CGI command).
12. RCP/MSU Connectivity:  
In a studio environment, the camera shall be able to be controlled via Sony's Remote Control Panel RCP-1500/1501/1530/3100 and MSU-1000/1500. The camera shall be able to connect to the control network via IP.  
\*The compatibility is described in Remote Camera System Guide.
13. Remote operation:  
Pan/tilt/zoom and other camera settings shall be able to be controlled using the supplied IR remote commander, or with the optional RM-IP500 / IP10 Remote Control Unit that can control multiple cameras.
14. Genlock:  
Genlock shall simplify integration with other systems in multi-camera broadcast environments. (For BRC-X400 only)
15. Versatile video outputs:  
Greater installation flexibility in professional broadcast and AV environments with 3G-SDI and HDMI video outputs. In addition to SDI/HDMI output, IP network transmission shall be able to be performed simultaneously by streaming function (SDI output does not support 4K). For streaming function, ITU-T H.264/H.265 shall apply to video compression mode (video codec) and it shall achieve high compression rate while maintaining the image quality. Also, it shall decrease the network bandwidth load. Moreover, the camera shall support multi-streaming output. Up to 3 codec modes shall be able to be selected.
16. Front tally lamps:  
Ideal for on-air broadcast use, the camera shall feature tally lamps on the front of the camera body. The front tally lamp shall have two brightness settings.
