Capital Christian Center

Sacramento, CA

CCI Solutions accomplished an extreme video makeover at Capital Christian Center in Sacramento. For the size of their facility, the video presentation side of things were greatly lacking and desperately needing a facelift.

The entire video system was gutted and a foundation was laid which was extremely flexible and of the highest quality. Fiber optics was the transport for the 1920x1080 video signal and keeping it digital the entire path to the projectors saved latency or delay issues that many facilities suffer.

By using large matrix switchers, any input source is sent to just about any destination in the facility. Stunning was a word that kept coming up on the quality and impact of their video presentation system.
