rooms: sanctuary

seating: 1,200

project type: new construction

contact: tod hornby  
worship arts pastor  
208-676-0632

url: lakecitycc.org

Lake City Community Church met with Ron Simonson, CCI Solutions' President and CEO and determined CCI was the kind of company their church needed to help them accomplish their ministry goals. Working with the architect and various contractors, who had already been hired, Simonson was able to make recommendations and the CCI team was also able to work within the workflow and customize various components of the project.

Lake City received counsel from multiple sources to go with one single integrator for all their systems. The church is glad they did! The Church was pleased that all the workmanship for their sound, video and lighting came from CCI Solutions. The technicians at CCI are not contracted from other companies. They are full-time CCI employees who are directly accountable to the CCI Solutions Project Manager and Consultants. Some have been working together as a team for over 30 years.

The team works seamlessly together on every project and have developed a cohesiveness and professional demeanor which keeps them together on the job site and beyond.

CCI Solutions is not just about making the sale and moving on to the next client. They genuinely care about the churches they serve and continue to emphasize customer service, quality, integrity and loyalty. CCI cares about each and every church they partner with and cheer for their effectiveness in ministry. That's their ministry.

## Quotes

*"We had a lot of choices. We were going to go with CCI Solutions from the very beginning based upon reputation. I heard from many people who have used CCI, they had been fantastic and the clients had been incredibly happy. We also had in mind and we had received counsel about contracting with one company to do all disciplines; meaning the Sound, Video and Lighting."*

*"These guys were top notch. The techs were obviously well trained, but also very personable & relational too. They got along well with all our other subcontractors especially when things got kind of crazy, which was huge because we had some bizarre scheduling going on. They were able to bend and be flexible."*
