# North Kitsap Baptist Church

Poulsbo, WA

North Kitsap Baptist Church was a fun challenge to take an old 70's style building with unique lines and retrofit it for a modern look while greatly improving the way the church communicates with technology. With new box lighting truss implemented in the room, it gave the church a lot of flexibility and allowed their creativity to grow to new heights.

Now they can put LED lights where they want and new projectors in ideal locations. Now their new HD projectors with tensioned screens makes a power impact visually and it allows the congregation to connect with the message more easily.
