Saddleback Refinery

Lake Forest, CA

Saddleback Church's Refinery is a 900-seat, 90-degree-wide, multipurpose worship and performance center for young people at Saddleback Church in Lake Forest, CA. The new facility derives its distinctive name from the church's avowed aim to "Refine young children into adulthood." The reported budget was \$2 million.

CCI Solutions started with the original design from long time partner Acoustic Dimensions. As often happens, particularly with high tech youth and childrens' ministry facilities, the project scope expanded and owner ministry objectives morphed. CCI Solutions worked with the Saddleback staff to design and implement the systems to meet both Saddleback's needs and to stay true to the original design concepts.

Quotes

"CCI Solutions was a team player from the word 'go' on The Refinery project. They worked diligently with our general contractor, architect and engineering team to make sure that every aspect of the integration of the technology was well designed and coordinated with the architecture of this complicated project."

CCI Solutions is a great company to deal with and we are glad that we followed their recommendations for the new Refinery Auditorium and Gymnasium project. We use the systems every day for various church events and conferences. The sound system has never let us down; the clarity and reliability are a big plus for Saddleback Church."

Greg Baker – Technical Director
